

# FLEXUP™ Double Gusset Stand-Up-Pouch

FLEXUP™ is an emerging packaging technology consisting of a flat pouch capable to contain between 0.5L - 6 L capacity.

FLEXUPs™ are made of client defined laminates designated to contain a wide variety of liquids, pastes or powders, for use in different industries such as food, chemical, detergents, oils and more. The pouch is equipped with a flexible handle, a lid or a sliding closure to adapt to any usage or purpose. When full or partially empty, the FLEXUPs™ remain stable and upright

**FLEXUP™ was developed to solve problems imposed by empty packages, before and after use.**

## Extremely compact

FLEXUPs™ are collapsible, having near-zero volume when empty. This allows efficient storing and forwarding in massive quantities

**In fact, FLEXUPs™ occupy at least 20 times less storage place than rigid containers.**

This makes FLEXUPs™ ideal for filling lines and environmentally friendly leaving a minimal impact on waste volumes.

## Fully customizable

FLEXUPs™ can be manufactured using a wide range of laminates in conformity with client's specifications or according to the substances they are intended to contain (detergents, food, beverages, powders, pastes, lubricants and more), to mechanical specifications implied by use and handling procedures or filling requirements (sterile, aseptic, hot filling etc).

To stay ahead of competition and making sure your products remain appealing and conserve their brand identities, KALCAD offers in house capabilities of high quality printing and finishing.

FLEXUP™ is easy to fill and use, featuring a carrying handle and an adjustable spout for easy filling and dispensing.

FLEXUPs™ are operational between -20°C - 100°C. .

FLEXUPs™ meet ISO 9001:2008, ISO 22,000:2005 (HACCP) and are in the process of certification for ISO 14001 and ISO 18001.
